Socially Responsible Use of Minerals in Electronic Products

Enpirion does not source metals directly from mines, smelters & processors. Enpirion is a fab-less semiconductor company and outsources all manufacturing to well established global suppliers to the semiconductor industry.

Enpirion works with its manufacturing suppliers to ensure that their policies are consistent with the Electronic Industry Code of Conduct including the Socially Responsible Use of Minerals in Electronics Products. Specifically, the suppliers certify that they do not use minerals (such as gold, tin, tantalum, tungsten, cobalt) that originate from conflict regions such as the Democratic Republic of Congo (DRC).

A handwritten signature in dark ink, appearing to read "Ashok Saxena".
